

PARTS LIST FOR
2504/3004/3504
PORTABLE
ELECTRIC DRIVEN/BELT DRIVEN
TOP FIRED OIL HEATED
HOT WATER PRESSURE WASHER

2504-SINGLE PHASE (AFTER SERIAL #15005912 and #15047915)

2504-THREE PHASE (AFTER SERIAL #15006771 and #15047915)

3004-SINGLE PHASE (AFTER SERIAL #15006433 and #15047915)

3004-THREE PHASE (AFTER SERIAL #15006771 and #15047915)

3504-SINGLE PHASE (AFTER SERIAL #15006097 and #15047915)

3504-THREE PHASE (AFTER SERIAL #15006771 and #15047915)

| | |
|-----------------------|---------------------------|
| PUMP OIL GRADE: | SAE20 or 30 Non-Detergent |
| PUMP OIL CAPACITY: | 41 oz. / 1.2 liters |
| FUEL NOZZLE: | 1.75 60°B Delavan |
| BTU INPUT: | 294,000 |
| PRESSURE NOZZLE SIZE: | |
| FOR 2504/3004: | 4.0 |
| FOR 3504: | 3.5 |

This Parts Listing has been compiled for your benefit. You can be assured your hot water pressure washer was constructed and designed with quality and performance in mind using over 25 years experience in the pressure washer business. Each component has been rigorously tested to insure the highest level of acceptance.

The contents of this Parts Listing are based on the latest product information available at the time of publication. The manufacturer reserves the right to make changes in price, color, materials, equipment, specifications or models at any time without notice.

WARNING

THIS IS A PROFESSIONAL HIGH PRESSURE, HOT WATER PRESSURE WASHER. CAUTION SHOULD BE OBSERVED WHEN USING OR REPAIRING THIS UNIT! READ AND FOLLOW THE SAFETY WARNINGS LISTED BELOW BEFORE ATTEMPTING ANY REPAIRS ON THIS PRESSURE WASHER!

SAFETY WARNINGS

1. NEVER alter or modify the equipment. Be sure any accessory items and system components being used will withstand the pressure developed. Use only genuine parts for repair of your pressure washer. Failure to do so can cause hazardous operating conditions and will VOID warranty.
2. This unit has multiple safety devices which should never be altered, modified, removed or made inoperable. If a device fails, replace immediately with only genuine manufacturer replacement parts.
3. Electrical System: The unit must be connected to a properly grounded electrical source which provides the correct voltage and adequate fuse protection. Disconnect from power source when making repairs. Never assume the pressure washer is safe to work on just because it is not operating. It could restart at any time. Never operate the pressure washer with electrical enclosures open, removed or damaged. Do not allow metal components of the pressure washer to come in contact with live electrical components.
4. Do not operate the unit without all protective covers in place. Know how to stop and bleed pressures quickly. Be thoroughly familiar with controls.
5. Before servicing the unit, turn unit off, and trigger the gun to release trapped pressure. Do not make repairs while the unit is running. Service in a clean, dry, flat area.
6. After testing the machine, DO NOT leave the pressurized unit unattended. Shut off the unit and release trapped pressure before leaving.

| Unit Shipping Dimension (In/Cm) | 57.5Lx35.5Wx59.5H/146Lx90Wx151H | | | | |

FLOW CHART

GENERAL THEORY OF OPERATION

WATER FLOW: Connect a pressurized water source to the INLET GARDEN HOSE CONNECTION (1) and turn on the water supply. The water will flow through a WATER STRAINER (2) which has a removable inspection bowl and then through a FLOAT VALVE (3) into a WATER FLOAT TANK (4).

The water is then drawn into the TRIPLEX HIGH PRESSURE PUMP (5) which has an UNLOADER (6) that bypasses the water when the trigger gun is closed. To protect the pump from heated water during this bypass stage, a HEAT DUMP VALVE (7) will open at 140°F/60°C allowing the heated water to escape. The Heat Dump Valve automatically resets when the water cools. Attached to the pump is a PRESSURE SWITCH (8) that controls the fuel supply to the burner.

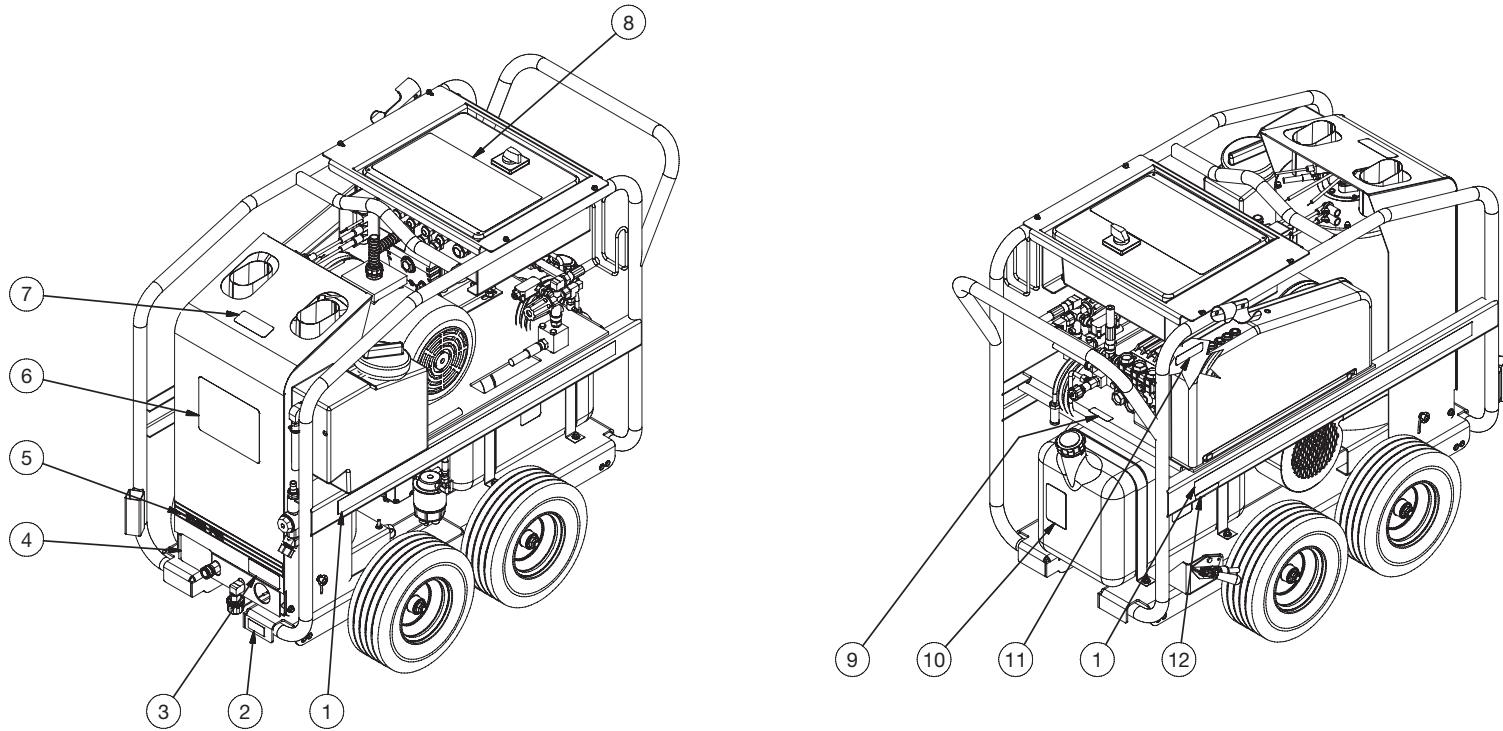

When using detergents, the solution passes through the DETERGENT STRAINER (9) located on the DETERGENT HOSE (10). The detergent solution then travels through the DETERGENT METERING VALVE (11).

From there, the water may be allowed to flow out of the DRAIN PLUG (12) or through HEAT EXCHANGER INLET (13) where it is heated when the burner is on. As the water exits the HEAT EXCHANGER OUTLET (14), It enters a safety system which protects the operator from danger. The safety system contains a HIGH TEMPERATURE LIMIT SWITCH (15) which senses the water temperature and shuts off the fuel supply to the burner if it gets too hot. If the unloader fails to bypass water or the burner remains on when the trigger gun is closed, the SAFETY RELIEF (16) will relieve and allow water to exit safely.

The heated water then flows through the HIGH PRESSURE HOSE (17) and to the TRIGGER GUN ASSEMBLY (18) which allows the operator to control the water spray. When the trigger gun is open, the water flows through the ADJUSTABLE PRESSURE DUAL LANCE (19) and exits the NOZZLE (20).

FUEL FLOW: The Fuel Pump draws fuel from the FUEL TANK (21) through a replaceable FUEL FILTER/WATER SEPARATOR (22) and into the FUEL PUMP (23). Fuel exits the fuel pump, into a FUEL SOLENOID VALVE (24) which controls fuel flow to the FUEL NOZZLE (25) where it ignites and burns in the heat exchanger.
